For Immediate Release

**INPUT SOLUTIONS SELECTS KAULKIN INFORMATION SYSTEMS
FOR SaaS-CLOUD COMPUTING TECHNOLOGIES**

*Applications in Government, Education, Healthcare/Medical,
Associations and Financial Services Take Center Stage*

February 25, 2009 - Input Solutions, Inc. has signed a license agreement to represent the Kaulkin Information Systems (KIS) *KISTrack*[™] suite of Software-as-a-Service (SaaS) technologies. Both companies are excited about the relationship and timing of their venture.

President of Input Solutions, John R. Solomon, states that “SaaS-Cloud Computing is a perfect model in these shaky economic times. Most organizations are watching their capital expenditures very closely and the pricing model offered by KIS allows users to pay for only the services they need. There are no costly annual maintenance fees and user training and administration is a breeze.” The need for organizations to access their important documents is greater than ever; KIS offers the ability to access all types of information from wherever there is an Internet connection (assuming the user has the proper application rights and authentication requirements).

Michael Binko, president and CEO of KIS, talks in terms of a “perfect storm.” Cloud computing technology has matured and the need is greater than ever for systems that allow organizations to ‘do more with less’ – lower budget with fewer staff and resources in general. The ROI of SaaS-Cloud computing is undeniable.”

The market for SaaS-cloud computing is considerable and cuts across a wide variety of industry segments. Associations, government agencies, medical practices, regulatory services, compliance/risk management and biotech are a few of the targeted application areas for the

newly forged Input Solutions and KIS team. Telecommuters who need access to data in filing systems in the office will also benefit greatly from the cloud computing aspect of the *KISTrack* platform offered by KIS.

Input Solutions has enjoyed a terrific reputation for providing document scanning services over the last 20 years. Their expertise goes well beyond just scanning. Input frequently provides the index or metadata needed for database applications and their extensive knowledge of OCR (Optical Character Recognition) makes many document collections retrievable by full text searching. “The addition of Kaulkin to our services allows us to provide the final five percent of what many of our customers need – the retrieval application and user-managed workflow tools,” says Lena Katzen, Input Solutions’ CEO. “This is a value added service to our clients and a distinct competitive advantage. We can’t wait to introduce the *KISTrack* application modules to our long list of repeat customers.”

About Input Solutions:

Input Solutions, Inc., founded in 1988, is a woman-owned small business conducting scanning and related value added services. As our name implies, our mission is to help our clients convert ever growing piles of paper into digital data and to make that data available and manageable through information technology systems. We identify information access, retrieval and distribution needs and provide software-as-a-service (SaaS) automated retrieval and workflow solutions.

About Kaulkin Information Systems

Kaulkin Information Systems is a technology and solution services company that offers simple, yet powerful and affordable, hosted Software-as-a-Service (SaaS) compliance, workflow and risk mitigation technologies. KIS was recently selected by Microsoft® Corporation as a portfolio-company in the Microsoft *Startup Accelerator Program* – an initiative that highlights companies developing unique technologies on Microsoft platforms.

KIS is one of the first technology and solution providers to address specific international, federal, state and industry-imposed regulatory compliance standards. This understanding and integration of compliance and risk management factors truly sets KIS technologies, solutions and intellectual property apart in the market.
